Notations	vii
PART III: DESIGN	
7 Design	1
7.1 Conceptual design	1
7.1.1 General	1
7.1.2 Methodology	1
7.1.3 Structural concept and basis for design	5
7.2 Structural analysis and dimensioning	6
7.2.1 General	6
7.2.2 Structural modelling	7
7.2.3 Dimensioning values	16
7.3 Verification of structural safety (ULS) for predominantly static loading	27
7.3.1 General	27
7.3.2 Bending with and without axial force	27
7.3.3 Shear	30
7.3.4 Torsion	43
7.3.5 Punching	45
7.3.6 Design with stress fields and strut and tie models	53
7.3.7 Compression members	59
7.3.8 Lateral instability of beams	64
7.3.9 3D Solids	65
7.4 Verification of structural safety (ULS) for non-static loading	68
7.4.1 Fatigue design	68
7.4.2 Impact and explosion	76
7.4.3 Seismic design	85
7.5 Verification of structural safety (ULS) for extreme thermal conditions	108
7.5.1 Fire design	108
7.5.2 Cryogenic design	125
7.6 Verification of serviceability (SLS) of RC and PC structures	129
7.6.1 Requirements	129
7.6.2 Design criteria	129
7.6.3 Stress limitation	130
7.6.4 Limit state of cracking	132
7.6.5 Limit states of deformation	148
7.6.6 Vibrations	155
7.7 Verification of safety and serviceability of FRC structures	157
7.7.1 Classification	157
7.7.2 Design principles	157
7.7.3 Verification of safety (ULS)	159
7.7.4 Serviceability Limit State (SLS)	165
7.8 Verification of limit states associated with durability	167
7.8.1 General	167
7.8.2 Carbonation induced corrosion – uncracked concrete	169
7.8.3 Chloride induced corrosion – uncracked concrete	174
7.8.4 Influence of cracks upon reinforcement corrosion	177

7.8.5	Risk of depassivation with respect to pre-stressed steel	178
7.8.6	Freeze/thaw attack	178
7.8.7	Chemical attack	182
7.8.8	Alkali-aggregate reactions	184
7.9	Verification of robustness	186
7.9.1	General	186
7.9.2	Specific methods to improve robustness by structural measures	188
7.10	Verification of sustainability	190
7.10.1	Impact on environment	190
7.10.2	Impact on society	191
7.10.3	Aesthetics	192
7.11	Verification assisted by numerical simulations	193
7.11.1	Purpose	193
7.11.2	Methods of numerical simulation	193
7.11.3	Safety formats for non-linear analysis	196
7.11.4	Resistance parameter identification	200
7.12	Verification assisted by testing	202
7.12.1	Scope	202
7.12.2	Definition	203
7.12.3	Aims of verification assisted by testing	204
7.12.4	Requirements	205
7.12.5	Planning	205
7.12.6	Testing conditions and measurements	207
7.12.7	Laboratory report	208
7.12.8	Statistical analysis of test results	209
7.12.9	Verification procedure	210
7.13	Detailing	213
7.13.1	Basic principles	213
7.13.2	Positioning of reinforcement	213
7.13.3	Prestressed structures	221
7.13.4	Bearings and joints	222
7.13.5	Structural members	223
7.13.6	Special aspects of precast concrete elements and composite structural members	229

PART IV: CONSTRUCTION

8	Construction	237
8.1	General	237
8.2	Execution management	237
8.2.1	Assumptions	237
8.2.2	Documentation	238
8.2.3	Quality management	238
8.3	Reinforcing steel works	239
8.3.1	Transportation and storage	240
8.3.2	Identification	240
8.3.3	Cutting and bending	240
8.3.4	Welding	242
8.3.5	Joints	244
8.3.6	Assembly and placing of the reinforcement	244
8.3.7	Construction documents – reinforcement	245

8.4	Prestressing works	245
8.4.1	General	245
8.4.2	Packaging, transportation, storage and handling of materials and components	246
8.4.3	Prestressing works for post-tensioning tendons	247
8.4.4	Prestressing works for pretensioning tendons	252
8.4.5	Replacement of tendons	254
8.4.6	Construction documents – prestressing	255
8.5	Falsework and formwork	255
8.6	Concreting	255
8.6.1	Specification of concrete	255
8.6.2	Placing and compaction	256
8.6.3	Curing	257
8.6.4	Execution with precast concrete elements	257
8.6.5	Geometrical tolerances	258

PART IV: CONSERVATION AND DISMANTLEMENT

9	Conservation	259
9.1	Conservation objectives	259
9.2	Conservation strategies and tactics	260
9.2.1	General	260
9.2.2	Strategy using proactive conservation measures	261
9.2.3	Strategy using reactive conservation measures	263
9.2.4	Situations where conservation measures are not feasible	264
9.3	Conservation management	264
9.3.1	Through-life conservation process	264
9.3.2	Conservation Plan	268
9.4	Condition survey	269
9.4.1	Condition survey and monitoring activities	269
9.4.2	Locations for surveys and monitoring activities	271
9.4.3	Tools and techniques for surveys and monitoring	271
9.4.4	Gathering data for Condition Control purposes	272
9.4.5	General flow of condition survey process	275
9.5	Condition assessment	277
9.5.1	Identification of deterioration mechanisms and prediction of damage	277
9.5.2	Identification of deterioration mechanism	277
9.5.3	Factors influencing deterioration	278
9.5.4	Determination of deterioration level and rate	278
9.6	Condition evaluation and decision-making	278
9.6.1	General	278
9.6.2	Threshold levels for deterioration of material and / or structural performance	279
9.6.3	Judgment criteria	279
9.6.4	Selection of interventions	280
9.7	Interventions	281
9.7.1	Maintenance interventions	282
9.7.2	Preventative interventions	282
9.7.3	Remedial interventions	283
9.7.4	Rebuild, reconstruction and replacement	283

9.7.5	Strengthening or upgrading interventions	284
9.7.6	Other activities and measures	285
9.7.7	Execution of interventions	286
9.8	Recording	287
10	Dismantlement, recycle and reuse	288
10.1	General	288
10.2	Dismantlement and removal	288
10.2.1	General	288
10.2.2	Consideration at design stage	288
10.3	Recycle and reuse	288
