Terminology	vi
<b>Part I: Framework</b>	<b>1</b>
1 Scope	1
2 Introduction	1
3 Proactive/reactive strategies	3
4 Economic considerations	6
<b>Part II: Procedures for condition assessment</b>	<b>8</b>
5 Deterioration modelling	8
5.1 Deterioration mechanisms	9
5.2 Deterioration models	11
5.2.1 Initiation period models	12
5.2.2 Propagation period model	13
5.3 Limit states of reinforcement corrosion (definitions)	15
5.3.1 Limit state equations	17
6 Modelling of spatial variability	18
7 Condition control	23
7.1 Framework of condition control	23
7.2 Collection of existing data	26
7.2.1 Data from the design/construction phase	26
7.2.2 Data from former repair interventions	26
7.2.3 Data from former inspections	27
7.3 Analysis of existing data	27
7.3.1 Assessment of data quality	27
7.3.2 Probability of Detection (PoD)	28
7.3.3 Uncertainty of measurement	34
7.3.4 Bayesian update	37
7.4 Condition assessment	38
7.5 Planning of inspections and monitoring	40
7.6 Documentation	42
<b>Part III Final remarks</b>	<b>43</b>
<b>Part IV Examples</b>	<b>44</b>
8 Remaining service life evaluation	44
8.1 Example I: Carbonation of concrete (SLS)	44
8.1.1 Collection of existing data	45
8.1.2 Analysis of existing data	45

8.1.3	Condition assessment	46
8.1.4	Inspection planning/documentation	47
8.2	Example II: Chloride-induced corrosion (SLS)	47
8.2.1	Collection of existing data	47
8.2.2	Analysis of existing data	49
8.2.3	Condition assessment	50
8.2.4	Intervention	53
8.3	Example III: Industrial hall with prestressed concrete frames (ULS)	54
8.3.1	Collection of existing data	55
8.3.2	Analysis of existing data	57
8.3.3	Condition assessment	58
8.3.4	Inspection planning/monitoring	61
